

CHEMICAL AND METALLURGICAL THERMODYNAMICS VOLUME II

CHAPTER 1 Single Component System

- 1.1 Thermodynamic Behaviour of Gases
 - 1.1.1 Equation of state of a gas
 - 1.1.2 Specific heats of gases
 - 1.1.3 Calculation of changes in thermodynamic properties of gases
 - 1.1.4 Fugacity
 - 1.1.4.1 Determination of fugacity from equation of state of a gas
 - 1.1.4.2 Graphical method for calculation of fugacity
 - 1.1.4.3 Variation of fugacity with temperature
 - 1.1.5 Statistical thermodynamic of gases
 - 1.1.5.1 Thermodynamic function of a monatomic ideal gas
 - 1.1.5.2 Statistical thermodynamic interpretation of specific heats of perfect diatomic gases:
- 1.2 Thermodynamics of Solids
 - 1.2.1 Statistical thermodynamics of solids
- 1.3 Thermodynamics of Liquids
- 1.4 Phase Equilibrium in Single Component System
 - 1.4.1 Stability criteria of a phase
 - 1.4.2 Criteria for two phases to be in equilibrium
 - 1.4.3 Fugacity of solids and liquids
 - 1.4.4 Vapour pressure of condensed phase and its variation with temperature
 - 1.4.4.1 Trouton's Rule
 - 1.4.4.2 Variation of equilibrium vapour pressure with total pressure
 - 1.4.5 Solid-liquid equilibria
 - 1.4.5.1 Variation of melting point with pressure
 - 1.4.5.2 Richard's rule
 - 1.4.6 Phase transformations in solid state
 - 1.4.7 Graphical representation of phase equilibria
 - 1.4.7.1. Equilibrium diagram for sulphur
 - 1.4.7.2 Equilibrium diagram for H₂O
- 1.5 Questions

CHAPTER 2 Multi Component Systems (General Treatment)

- 2.1 Partial Molar Properties
- 2.2 Chemical Potential
- 2.3 The Phase Rule
- 2.4 Important Relationships involving Chemical Potentials
 - 2.4.1 Gibbs-Duhem equations
- 2.5 Questions

CHAPTER 3 Single Phase Multi-Component Systems-Solutions

- 3.1 Mixtures of Gases
 - 3.1.1 Statistical thermodynamics of mixtures of gases
- 3.2 Solutions
 - 3.2.1 Terminology
 - 3.2.1.1 Relationship between activity and other properties of solutions
 - 3.2.1.2 Raoult's law and Ideal solutions
 - 3.2.1.3 Non-ideal solutions and excess thermodynamic properties

- 3.2.1.3.1 Dilute solutions and Henry's law
- 3.2.2 Standard states and allied relationships:
- 3.2.3 Calculation of thermodynamic properties of solutions from experimentally determinable data
 - 3.2.3.1 Calculation of partial molar properties from integral properties
 - 3.2.3.2 Calculation of integral and partial molar properties from knowledge of the partial molar property of one of the components:
 - 3.2.3.3 Calculation of thermodynamic properties from a knowledge of the ratio of activities of components in binary systems:
 - 3.2.3.4 Empirical analytical representation of experimental thermodynamic data on solutions
 - 3.2.3.4.1. Polynomial Form
 - 3.2.3.4.2. Wilson's method
 - 3.2.3.4.3. Wagner's method
- 3.2.4 Interpretation of behaviour of solutions-Thermodynamic models:
 - 3.2.4.1 Classical thermodynamic Models:
 - 3.2.4.1.1 Ideal associated solution model involving one associated complex only:
 - 3.2.4.1.2 Ideal associated solution model involving more than one complex:
 - 3.2.4.2. Statistical thermodynamic analysis of solutions:
 - 3.2.4.2.1. Regular solution model:
 - 3.2.4.2.2 Quasi-chemical theory
 - 3.2.4.2.3. Solution of components of different sizes:
- 3.3 Questions

CHAPTER 4 Phase Equilibria in Multi-Component Systems

- 4.1 Phase Stability Criteria in Multicomponent Systems – Stability Functions:
- 4.2 Vapour-Solution Equilibria
 - 4.2.1 Calculation of vapour pressure of binary solutions at a given temperature:
 - 4.2.2. Calculation of boiling and condensation points of binary solutions:
 - 4.2.3. Phase diagram:
 - 4.2.3.1. Lever rule:
 - 4.2.3.2. Konovalov's first rule:
 - 4.2.4. Azeotropy:
 - 4.2.4.1. Positive and Negative azeotropes:
 - 4.2.4.2. Konovalov's second rule:
 - 4.2.5. Condensation and boiling of immiscible liquids:
 - 4.2.6 Phase diagram for partially soluble liquids:
- 4.3 Phase equilibria in condensed systems
 - 4.3.1 Critical phenomenon in liquid state:
 - 4.3.2 Monotectic reaction:
 - 4.3.3 Syntectic reaction
 - 4.3.4 Isomorphous systems
 - 4.3.5 Eutectic reaction
 - 4.3.6 Peritectic reaction
 - 4.3.7 Complex systems
 - 4.3.8 Eutectoid reaction
 - 4.3.9 Peritectoid reaction
- 4.4 Derivation of Free Energy
- 4.5 Questions

CHAPTER 5 Chemical Equilibria

- 5.1 Concept of Chemical Equilibrium
- 5.2 Law of Chemical Equilibrium, the Equilibrium Constant:
 - 5.2.1 Variation of equilibrium constant with temperature-Vant Hoff equation:
 - 5.2.2. Variation of equilibrium constant with pressure:
- 5.3 Direction of Chemical Change; Van't Hoff Reaction-Isotherms
- 5.4 Gaseous Phase Chemical Reactions
 - 5.4.1. Thermodynamics of the reaction $2\text{H}_2 + \text{O}_2 = 2\text{H}_2\text{O}$.
 - 5.4.2 Thermodynamics of the reaction
 - 5.4.3 Thermodynamics of the reaction between CO and H_2O
 - 5.4.4 Thermodynamics of the reaction $\text{N}_2 + 3\text{H}_2 = 2\text{NH}_3$:
 - 5.4.5 Thermodynamics of other common gaseous phase reactions
- 5.5 Reactions Involving a Gas and a Condensed Phase
 - 5.5.1 Oxidation of Carbon, the Boudouard reaction
 - 5.5.2 Solubility of gases in condensed phases
 - 5.5.2.1 Effect of temperature on solubility of gases
- 5.6 Reactions Involving Two Pure Condensed Phases and a Gaseous Phase
 - 5.6.1 Decomposition of Carbonates
 - 5.6.2. Oxidation-Reduction equilibria in metals and their oxides
 - 5.6.3 Metal-Metal halide reactions:
 - 5.6.4 Successive reactions involving condensed phases and a gaseous phase in packed columns or beds
- 5.7 Reactions in condensed Phases
 - 5.7.1 Solvent extraction
 - 5.7.1.1. Multiple Cross-Current Extraction
 - 5.7.1.2 Counter-current extraction
- 5.8 Statistical Thermodynamics of Chemical Reactions
- 5.9 Questions

CHAPTER 6 Electrolytes and Electrochemical Processes

- 6.1 Aqueous Electrolytes
 - 6.1.1. Mean activity of coefficients for electrolytes
- 6.2 Molten Electrolytes
 - 6.2.1 Slags:
- 6.3 Solid Electrolytes
- 6.4 Criteria for Equilibrium in Electrochemical Processes
- 6.5 Emf Cells
 - 6.5.1 Single electrode potential:
 - 6.5.1.1 Classification of electrodes:
 - 6.5.1.2 Standard electrode potentials and e.m.f. series
 - 6.5.2 Concentration cells:
 - 6.5.2.1 Concentration cells with solid electrolytes:
 - 6.5.3 Application of e.m.f. cells
- 6.6 Slag-Metal Reactions:
- 6.7 Questions

CHAPTER 7 Surface and Interfacial Phenomenon

- 7.1 Surface Energy and Surface Tension-General Treatment
- 7.2 Surface Tension of Liquids
- 7.3 Surface Tension of Solids
 - 7.3.1 Surface Tension of Metals:

- 7.4 Interfaces
 - 7.4.1 Grain Boundaries
 - 7.4.2 Phase Boundaries
- 7.4.3 Electrified Interfaces
- 7.5 Shapes of Surfaces and Interfaces
- 7.6 Questions

CHAPTER 8 Conventional Experimental Techniques

- 8.1 Densitometry
 - 8.1.1 Archimedean method
 - 8.1.2 Pycnometric method:
 - 8.1.3 Dilatometric method
 - 8.1.4 X-Ray Diffraction method
 - 8.1.5 Calculation of other Functions from Density Data
- 8.2 Calorimetry
 - 8.2.1 Isoperibol Calorimeters:
 - 8.2.2 Isothermal Calorimeters:
 - 8.2.3 Adiabatic Calorimeters:
 - 8.2.4 Constant-heat-flow type calorimeters:
 - 8.2.5 Surfaces of error:
- 8.3 Vapour Pressure Techniques
 - 8.3.1 Direct methods:
 - 8.3.2 Indirect methods
 - 8.3.2.1 Knudsen Effusion Method
 - 8.3.2.2 Langmuir Technique:
- 8.4 Chemical Equilibria Technique
 - 8.4.1 Preparation of Gaseous Mixture:
 - 8.4.2 Equilibration techniques:
 - 8.4.2.1 Open circuit technique:
 - 8.4.2.2 Closed Circuit Technique:
 - 8.4.3.3 Static atmosphere technique:
- 8.5 Electromotive Force Method
 - 8.5.1 Aqueous electrolyte cells:
 - 8.5.2 Molten salt electrolyte cells:
 - 8.5.3 Solid electrolyte cells:
- 8.6 Surface Tension Measurements
 - 8.6.1 Surface Tension Measurement of Liquids
 - 8.6.1.1 Sessile Drop Method
 - 8.6.1.2 Pendant Drop Method
 - 8.6.1.3 Drop-Weight Method
 - 8.6.1.4 Maximum Bubble Pressure Method
 - 8.6.2 Surface energies of solids
 - 8.6.2.1 Zero-Creep method
 - 8.6.2.2 Polyphaseequilibria technique
 - 8.6.2.3 Controlled cleavage method
- 8.7 Questions
