

ENGINEERING FLUID MECHANICS

CHAPTER 1 Properties of Fluids

- 1.1 Introduction
- 1.2 Development of Fluid Mechanics
- 1.3 Units of Measurement (SI units)
- 1.4 Mass, Density, Specific Weight, Specific Volume, Specific Gravity
- 1.5 Viscosity
- 1.6 Pressure
- 1.7 Compressibility and Elasticity
- 1.8 Thermodynamic Properties
- 1.9 Gas Laws
- 1.10 Vapour Pressure
- 1.11 Surface Tension and Capillarity
- 1.12 Regimes in Fluid Mechanics
- 1.13 Fluid Properties and Analysis of Fluid Flow Problems

CHAPTER 2 Kinematics of Fluid Flow

- 2.1 Introduction
- 2.2 Visualisation of Flow Pattern
- 2.3 Velocity
- 2.4 Types of Flow
- 2.5 Stream Lines, Path Lines, Streak Lines and Stream Tubes
- 2.6 Principle of Conservation of Mass
- 2.7 Acceleration of Fluid Particles
- 2.8 Rational & Irrotational Motions
- 2.9 Circulation
- 2.10 Velocity Potential
- 2.11 Stream Function
- 2.12 Solution of Laplace Equation
- 2.13 Utility of Flow Net Analysis Problems

CHAPTER 3 Equations of Motion and Energy Theorem

- 3.1 Introduction
- 3.2 Force Influencing Motion
- 3.3 Equations of Motion
- 3.4 Integration of Euler's Equation
- 3.5 Bernoulli's Equation for Compressible Fluids
- 3.6 Measurement of Pressure and Velocity Head
- 3.7 Assumptions in Bernoulli's Equation
- 3.8 Bernoulli's Equation as Energy Equation
- 3.9 Energy Correction Factor Problems

CHAPTER 4 Statics

- 4.1 Introduction
- 4.2 Fluid Pressure

4.3 Pressure Variation in Static Compressible Fluids
4.4 Manometers
4.5 Forces Acting on Immersed Plane Surfaces
4.6 Total Force on Immersed Curved Surfaces
4.7 Floating Bodies
4.8 Stability of Floating and Submerged Bodies
4.9 Metacentre
4.10 Relative Equilibrium
Problems

CHAPTER 5 Application of Bernoulli's Equation

5.1 Introduction
5.2 Pressure Distribution in Irrotational Flow
5.3 Cavitation
5.4 Efflux from Conduit Constructions
5.5 Orifice Plate and Venturimeter
5.6 Orifices and Mouthpieces
5.7 Large Orifices and Sharp Crested Weirs
5.8 Flow Under a Sluice Gate
5.9 Vortex Motion
5.10 Analysis of Liquid Jets
Problems

CHAPTER 6 Momentum Equation and Applications

6.1 Introduction
6.2 Development of Momentum Equation
6.3 Momentum Correction Factor
6.4 Forces on Fixed & Moving Plates
6.5 Moving Plates and Vanes
6.6 Applicability of Energy and Momentum Equations
6.7 Angular Momentum
Problems

CHAPTER 7 Dimensional Analysis and Similitude

7.1 Introduction
7.2 Dimensions
7.3 Physical Quantities in Fluid Flow
7.4 Dimensionally Homogenous Equations
7.5 Characteristics of Homogenous Equations
7.6 Buckingham's π Theorem
7.7 Calculation of Dimensionless Parameters
7.8 Similitude
7.9 Physical Significance of Dimensionless Parameters
7.10 Complete Similarity
7.1 Model Studies and Model Scales
Problems

CHAPTER 8 Laminar Flow

8.1 Introduction

- 8.2 Dependence of Shear on Pressure
 - 8.3 Laminar Flow Through Circular Pipes
 - 8.4 Laminar Flow Through Non-Circular Pipes
 - 8.5 Flow Through Porous Media
 - 8.6 Stokes' Law
 - 8.7 Fluidization
 - 8.8 Elements of Lubrication Mechanics
 - 8.9 Measurement of Viscosity
 - 8.10 Transition from Laminar to Turbulent Flow
 - 8.11 Instability of Laminar Flow
 - 8.12 Blood Circulation in Human Body
- Problems

CHAPTER 9 Layer Theory

- 9.1 Introduction
 - 9.2 Boundary Layer Thickness and its Characteristics
 - 9.3 Laminar and Turbulent Boundary Layers and Laminar Sublayer
 - 9.4 Laminar Boundary Layer
 - 9.5 Turbulent Boundary Layer
 - 9.6 Laminar Sublayer
 - 9.7 Application of Momentum Equation
 - 9.8 Hydrodynamically Smooth and Rough Boundaries
 - 9.9 Boundary Layer on Rough Surface
 - 9.10 Atmospheric Boundary Layer
 - 9.11 Establishment of Flow in Pipes
 - 9.12 Effect of Compressibility
 - 9.13 Separation
 - 9.14 Methods of Avoiding Separation
- Problems

CHAPTER 10 Turbulent Flow

- 10.1 Nature of Turbulent Flow
 - 10.2 Shear Stress Due to Turbulence
 - 10.3 Velocity Distribution in Turbulent Flow
 - 10.4 Resistance of Smooth and Artificially Roughened Pipes
 - 10.5 Commercial Pipes
 - 10.6 Turbulent Flow in Noncircular Conduits
 - 10.7 Turbulent Diffusion
 - 10.8 Dispersion From Smoke Stacks
- Problems

CHAPTER 11 Problems in Pipe Flow

- 11.1 Introduction
- 11.2 Energy Losses in Transition
- 11.3 Losses Due to Sudden Expansion and Contraction
- 11.4 Energy Losses in Pipe Fittings and Valves
- 11.5 Flow in Bends
- 11.6 Concept of Equivalent Length
- 11.7 Solution of Pipe Flow Problems
- 11.8 Siphons

11.9 Parallel Pipes
11.10 Branching Pipes
11.11 Pipe Networks
11.12 Resistance to Breathing
Problems

CHAPTER 12 Forces on Immersed Bodies

12.1 Introduction
12.2 Types of Drag
12.3 Dimensional Analysis
12.4 Deformation, Friction and Form Drags
12.5 Drag on a Sphere
12.6 Drag on a Cylinder
12.7 Drag on a Flat Plate
12.8 Drag on a Airfoil
12.9 Effect of Free Surface on Drag
12.10 Effect of Compressibility on Drag
12.11 Development of Lift
12.12 Lifting Vanes
12.13 Drag on Airfoils and Vanes
12.14 Polar Diagram for Airfoils
12.15 Effect of Compressibility
12.16 Airplane Mechanics
12.17 Wave Forces
Problems

CHAPTER 13 Flow in Open Channels

13.1 Introduction
13.2 Steady Uniform Flow
13.3 Steady Uniform Flow in Alluvial Channels
13.4 Velocity Distribution in Open Channels
13.5 Channel of Efficient Cross-section
13.6 Specific Energy & Critical Depth
13.7 Open Channel Transitions
13.8 Free Overfall
13.9 Gradually Varied Flow
13.10 Characteristics of Surface Profiles
13.11 Integration of the Varied Flow Equation
13.12 Hydraulic Jump
13.13 Surges and Waves in Open Channels
Problems

CHAPTER 14 Compressible Flow

14.1 Introduction
14.2 Basic Relationships
14.3 Propagation of Elastic Waves
14.4 Mach Number & its Importance
14.5 Energy Equation for Compressible Fluids
14.6 Stagnation Pressure in Compressible Flows
14.7 Frictionless Adiabatic Flow Through Pipes of Varying Cross-Section

14.8 Frictionless Adiabatic Flow Through Orifices and Nozzles
14.9 Normal Shock Waves
14.10 Flow Through Converging Diverging Nozzles
Problems

CHAPTER 15 Unsteady Flow

15.1 Introduction
15.2 Types of Unsteady Flows
15.3 Equation of Motion for Unsteady Flow
15.4 Flow Around a Body Moving Through Stationary Fluid
15.5 Periodic Flows
15.6 Nonperiodic Flows
Problems

CHAPTER 16 Turbines

16.1 Introduction
16.2 Water Wheels
16.3 Classification of Turbines
16.4 Pelton Wheel
16.5 Theory of Impulse Turbines
16.6 Pelton Wheel Parameters
16.7 Double Over-hung Pelton Wheel
16.8 Governing of Pelton Wheels
16.9 Performance of Pelton Wheel
16.10 Francis Turbine
16.11 Velocity Triangles for Radially Inward Flow Turbines
16.12 Francis Runner Dimensions
16.13 Kaplan Turbine
16.14 Deriz Turbine
16.15 Governing of Reaction Turbines
16.16 Cavitation in Turbines
16.17 Selection of Turbines
Problems

CHAPTER 17 Pumps

17.1 Introduction
17.2 Discharge Relation for Reciprocating Pumps
17.3 Power Requirements
17.4 Air Vessels
17.5 Discharge Variation in the Air Vessel
17.6 Other Pumps of Displacement Type
17.7 Description of Centrifugal Pumps
17.8 Classification of Centrifugal Pumps
17.9 Velocity Diagrams
17.10 Manometric Head, Losses, Energy Equation and Efficiencies
17.11 Axial and Mixed Flow Pumps
17.12 Similitudes in Pumps
17.13 Characteristic Curves for Centrifugal Pumps
17.14 Pumps in Series (Multistage) and in Parallel
17.15 Preliminary Design of Centrifugal Pumps

17.16 Selection of Rotodynamic Pumps
17.17 Pump Intakes and Sump
Problems

CHAPTER 18 Miscellaneous Devices

18.1 Introduction
18.2 Hydraulic Lift
18.3 Hydraulic Press
18.4 Hydraulic Accumulator
18.5 Differential Accumulator
18.6 Hydraulic Ram
18.7 Hydraulic Intensifier
18.8 Air-lift Pump and Jet Pump
Problems
