

PLAIN & REINFORCED CONCRETE VOLUME II

CHAPTER 1 Continuous Beams

- 1.1 Basic of Analysis
- 1.2 Maximum Bending Moment & Shear Force
- 1.3 Empirical Coefficients
- 1.4 Design Example: Continuous Beams

CHAPTER 2 Beams Curved in Plan

- 2.1 General
- 2.2 Analysis of a Curved Beam
- 2.3 Stresses Due to Torsion
- 2.4 Reinforcement For Torsion
- 2.5 Design Example: Curved Beam

CHAPTER 3 Shrinkage and Creep

- 3.1 Shrinkage of Concrete
- 3.2 Stress-Time Effect on Strain (Creep)
- 3.3 Shrinkage in Symmetrically Reinforced Sections
- 3.4 Shrinkage in Singly Reinforced Beams
- 3.5 Creep in Concrete Structures
- 3.6 Shrinkage and Creep in Columns
- 3.7 Shrinkage and Creep in Beams
- 3.8 Shrinkage and Creep in Arches and Other Statically Indeterminate Structures

CHAPTER 4 Portal Frames

- 4.1 General
- 4.2 Design Examples
 - Two Hinged Portal Frames
 - Fixed Ended Portal Frame
 - Two Storeyed Portal Frame

CHAPTER 5 Building Frames

- 5.1 General
- 5.2 Substitute Frames
- 5.3 Method of Analysis
- 5.4 Design Example
 - Seven Storey Office Building

CHAPTER 6 Tank

- 6.1 General
- 6.2 Overhead Circular Tanks
 - Design Example
- 6.3 Reissener's Approximate Method
- 6.4 Design of Flat Base Slab
 - Design Example
- 6.5 Design of Intze Tank

Design Example
6.6 Supporting Towers for Circular Tanks
Design Example
6.7 Rectangular Tanks
Design Example
6.8 Underground Tanks

CHAPTER 7 Pipes, Silos and Bunkers

7.1 Pipes
7.2 Pipes Supported on One Quarter of the Circumstances
7.3 Other Details of R.C. Pipes:
Reinforcement
Design Example
7.4 Silos and Bunkers
7.5 Janssen's Theory
7.6 Airy's Theory
Design Example
7.7 Rectangular Bunkers with Sloping Bottoms
7.8 Rectangular Bunkers with High Side Walls
7.9 Battery of Bunkers with High Side Walls
7.10 Battery of Bunkers with Low Side Walls
7.11 Sliding Shuttering

CHAPTER 8 Reinforced Concrete Chimneys

8.1 General
8.2 Design Factors
8.3 Wind Pressure
8.4 Temperature
8.5 Design Example
8.6 Flue Opening in the Chimney
8.7 Foundation

CHAPTER 9 Concrete Shell Roofs

9.1 Introduction
9.2 Forms of Shells
9.3 Structural Behaviour of a Cylindrical Shell
9.4 Shell Dimensions and Allowable Stresses
9.5 Method of Analysis
Design Example
9.6 North-light Shell Roofs
Design Example
9.7 Membrane Analysis of Shells
Design Example
9.8 General Theory of Shells
Design Example

CHAPTER 10 Folded Plate Roofs

10.1 Introduction
10.2 Design Example

CHAPTER 11 Beam and Slab Bridges

- 11.1 General
- 11.2 Wheel Load on Slabs
- 11.3 Load Distribution in Beams
- 11.4 Design Examples
- Slab Culvert
- Box Culvert
- T-Beam Culvert
- 11.5 Balanced Cantilever Bridges
- Design Example

CHAPTER 12 Arch Bridges

- 12.1 General
- 12.2 Stresses in Fixed Arch
- 12.3 Analysis of a Hingeless Arch
- 12.4 Influence Lines for Vertical Loads
- 12.5 Horizontal Forces
- 12.6 Hinges
- 12.7 Preliminary Design
- 12.8 Design Examples
- Filled-spandrel arch
- Open-spandrel arch
- 12.9 Bow-String Girder Bridge
- 12.10 Analysis of a Two-Hinged Arch
- Design of Bow-String Girder Bridge

CHAPTER 13 Pre-Stressed Concrete

- 13.1 Introduction
- 13.2 Advantages of Prestressed Concrete
- 13.3 Difference Between Reinforced Concrete and Prestressed Concrete
- 13.4 Prestressing Systems
- 13.5 Loss of Prestress
- 13.6 Materials Used in Prestressed Concrete
- 13.7 Fire Resistance
- 13.8 Working Stresses and Design Criteria
- 13.9 Preliminary Design of Beams
- Design Examples
- 13.10 Design of a Dam
- 13.11 Bending of Cables
- 13.12 End Blocks
- 13.13 Analysis of Stresses due to Pre-stressing
- 13.14 Stresses in Beams Due to Applied-Loads
- 13.15 Ultimate Strength of Pre-stressed Concrete Beams
- 13.16 Design Examples
- Prestressed Concrete Beam
- Floor Beams
- T-floor Beams
- Electric Pole
- T-beam Bridge

13.17 Prestressing of Members Subjected to Pure Tension
13.18 Prestressed Concrete Tanks
13.19 Buckling of Prestressed Concrete Members
13.20 Prestressing Statically Indeterminate Structures
13.21 Theory of Indeterminate Prestressed Structures
Design Examples
