<b>Chapter 1. INTRODUCTION TO GEOMATICS ENGINEERING</b>	<b>1 – 13</b>
1.1 Introduction	1
1.1.1 History of surveying and mapping	1
1.2 Importance of Geomatics Engineering	2
1.3 What is Geomatics Engineering?	3
1.3.1 Definition of geomatics	3
1.3.2 Disciplines covered under geomatics engineering	4
1.4 Maps and Map Numbering Systems	8
1.4.1 Definition of map	8
1.4.2 Map scale and classification of maps	8
1.4.3 Concept of minimum plotting accuracy	8
1.4.4 Map numbering system	9
Summary	12
Exercises	12
<b>Chapter 2. DATUM AND MAP PROJECTION SYSTEMS</b>	<b>14 - 28</b>
2.1 Introduction	14
2.2 Coordinate Systems in Two Dimensions	14
2.2.1 Rectangular coordinate system	14
2.2.2 Polar coordinate system	15
2.3 Coordinate Systems in Three Dimensions	16
2.3.1 Rectangular coordinate system	16
2.3.2 Spherical coordinate system	16
2.4 Datums and Geodetic Coordinate Systems	17
2.4.1 Datum	17
2.4.2 Geodetic Coordinate System	19
2.5 Datum and Coordinate Transformations	20
2.5.1 Datum transformation	20
2.5.2 Coordinate transformation	20
2.6 Map Projection Systems	23
2.6.1 Types of map projections	23
Summary	28
Exercises	28
<b>Chapter 3. MODERN FIELD SURVEYING SYSTEMS</b>	<b>29 - 50</b>
3.1 Introduction	29
3.2 Automatic and Digital Levels	29
3.3 Electronic Theodolites	30
3.3.1 Working of an electronic theodolite	30
3.4 Electronic Distance Measurement	31
3.4.1 The instrument	31
3.4.2 The reflector	32
3.4.3 Principle of EDM	32
3.4.4 Working of an EDM equipment	33
3.4.5 Accuracy considerations	33

3.5	Total Station	34
	3.5.1 Concept of Total Station	34
	3.5.2 Working of Total Station	34
	3.5.3 Accuracy considerations	36
3.6	Global Positioning System (GPS)	36
	3.6.1 GPS segments	37
	3.6.2 GPS measurements	39
	3.6.3 GPS errors and biases	40
	3.6.4 Surveying with GPS	44
	3.6.5 Coordinate transformations	47
	3.6.6 Accuracy considerations	47
	Summary	49
	Exercises	49

## Chapter 4. FIELD ASTRONOMY

51 - 166

4.1	Introduction	51
4.2	The Earth and Position of a Point on Earth	51
	4.2.1 The earth	51
	4.2.2 Position of a point on a sphere	52
	4.2.3 Position of a point on the earth	54
4.3	Solar System and Celestial Sphere	57
	4.3.1 Solar system	57
	4.3.2 Celestial sphere	59
4.4	Definition of Astronomical Terms	60
4.5	Motion of the Earth and Apparent Motion of the Sun and Stars	62
4.6	Astronomical Coordinate Systems	64
	4.6.1 Altitude ( $\alpha$ ) and azimuth (A) system	65
	4.6.2 Declination ( $\delta$ ) and right ascension (R.A.) system	67
	4.6.3 Declination ( $\delta$ ) and hour angle (h) system	71
4.7	The Astronomical Triangle	72
4.8	Some Important Relations	74
	4.8.1 Altitude of celestial pole is latitude of place of observation	74
	4.8.2 Relation between hour angle of $\gamma$ and R.A. and hour angle of any celestial body	75
4.9	Additional Astronomical Terms and/or Special Cases	76
	4.9.1 Transit or culmination	76
	4.9.2 Circumpolar stars	77
	4.9.3 Elongation	79
	4.9.4 Celestial body at prime vertical	79
	4.9.5 Celestial body at horizon	80
4.10	Astronomical Corrections to Sun and Star Observations	80
	4.10.1 Refraction correction	80
	4.10.2 Parallax correction	80
	4.10.3 Semi-diameter correction	82
4.11	Problems on Solution of Astronomical Triangle	83
	4.11.1 Transit or culmination cases	83
	4.11.2 Right angled astronomical triangle cases	89
	4.11.3 General cases	97

## CONTENTS

xi

4.12	Time	104
	4.12.1 Introduction	104
	4.12.2 Sidereal and solar times	105
	4.12.3 Relation between time and longitude and between Greenwich time	109

and local time	
4.12.4 Standard time	111
4.12.5 Interconversion of time systems	111
4.12.6 Conversion of LAT to LMT and vice versa	112
4.12.7 Relationship between sidereal time interval and mean (solar) time interval	117
4.12.8 Conversion of LST to LMT and vice versa	121
4.12.9 Ephemeris time	128
4.12.10 Atomic time	129
4.12.11 Solar calendars	129
4.12.12 International date line	130
4.13 Problems on Time	132
4.14 Determination of Time, Azimuth and Latitude	146
4.14.1 General details	146
4.14.2 Actual field observations to stars and the sun	150
4.14.3 Methods of determination of time	152
4.14.4 Methods of determination of azimuth	154
4.14.5 Methods of determination of latitude	156
Exercises	163

**Chapter 5. BASIC PRINCIPLES OF PHOTOGRAMMETRY** **167 - 228**

5.1 Introduction	167
5.2 Basic Concepts	167
5.2.1 Photogrammetry – definition and importance	167
5.2.2 Comparison of photograph with a map	168
5.2.3 Basic terms	169
5.2.4 Types of photographs	173
5.2.5 Flight strips and overlaps	174
5.2.6 Flying height and scale of vertical aerial photograph	177
5.3 Perspective Geometry of Aerial Photograph	188
5.3.1 Tilted (near vertical or vertical) photographs	188
5.3.2 Properties of isocenter	190
5.3.3 Scale of a tilted photograph	192
5.4 Relief and Tilt Displacements	193
5.4.1 Direction and magnitude of relief (height) displacement	194
5.4.2 Direction and magnitude of tilt displacement	199
5.4.3 Combined effect of relief and tilt displacements - radial line assumption	203
5.5 Terrestrial Photogrammetry	206
5.5.1 Data acquisition systems – terrestrial cameras	206
5.5.2 Computational methods in terrestrial photogrammetry	207
5.6 Flight Planning	215
5.6.1 Photographic scale	215
5.6.2 Longitudinal and lateral overlaps	216
5.6.3 Flying height	216

xii CONTENTS

5.6.4 Relief displacement	216
5.6.5 Tilt of the camera axis	216
5.6.6 Computations for flight planning	217
Exercises	223

**Chapter 6. STEREOSCOPY** **229 – 261**

6.1	Introduction	229
6.2	The Human Eye	229
6.3	Monocular, Binocular and Stereoscopic Visions,	229
	6.3.1 Monocular vision	229
	6.3.2 Binocular vision	230
	6.3.3 Stereoscopic vision	231
6.4	Parallax	231
6.5	Stereoscopes	232
	6.5.1 The lens or pocket stereoscope	232
	6.5.2 The mirror stereoscope	233
6.6	Conditions of Stereo Vision	233
6.7	Base Lining	235
6.8	Vertical Exaggeration and Base-Height Ratio	237
6.9	Parallax Formula for Height (Elevation) Determination	238
6.10	Principle of Floating Mark	241
6.11	Parallax Bar, Parallax Bar Reading and Elevation Determination	248
6.12	Corrections to Elevations Determined by Parallax Bar Observations	254
	Exercises	259

**Chapter 7. GROUND CONTROL EXTENSION FOR PHOTOGRAMMETRIC MAPPING** **262 - 276**

7.1	Introduction	262
7.2	Aerial Triangulation	263
7.3	Radial Triangulation – General	265
	7.3.1 Geometrical principle of radial triangulation	265
	7.3.2 Pass points	267
	7.3.3 Planning for radial triangulation	698
7.4	Radial Triangulation – Execution	268
	7.4.1 Graphical radial triangulation	269
	7.4.2 Mechanical radial triangulation – slotted template method	273
	7.4.3 Analytical (numerical) radial triangulation	275
	7.4.4 Sub triangulation using control generated by radial triangulation	275

**Chapter 8. PHOTOGRAMMETRIC MAPPING** **277 - 286**

8.1	Introduction	277
8.2	Advantages and Disadvantages	277
8.3	Mapping Using Paper Prints	278
	8.3.1 Planimetric mapping by direct tracing methods	278
	8.3.2 Mapping by using instruments with stereometers	279
8.4	Mapping Using Stereoplottting Instruments	280
8.5	Mosaics	281

CONTENTS xiii

	8.5.1 Introduction	281
	8.5.2 Types of mosaics	282
	8.5.3 Rectification and ratioing	283
8.6	Map Substitutes	283
	8.6.1 Introduction	283
	8.6.2 Map substitutes	283

**Chapter 9. FUNDAMENTALS OF REMOTE SENSING** **287 - 300**

9.1	Introduction	287
-----	--------------	-----

9.2	Electromagnetic Spectrum	287
9.3	A Remote Sensing System	289
	9.3.1 Spectral response	290
	9.3.2 Radiometric response	290
	9.3.3 Spatial response	290
	9.3.4 Image geometry	291
	9.3.5 Temporal resolution	291
9.4	Interaction of Electromagnetic Radiation with the Atmosphere	291
	9.4.1 Scattering	291
	9.4.2 Absorption	292
9.5	Interaction of Electromagnetic Radiation with Earth Surface	293
	9.5.1 Interaction of earth surface features with EM radiation in visible and NIR regions	294
	9.5.2 Interaction of earth surface features with EM radiation in TIR region	295
	9.5.3 Interaction of earth surface features with EMS in the microwave region	297
	Summary	299
	Exercises	299

**Chapter 10. REMOTE SENSING DATA ACQUISITION: PLATFORMS AND SENSORS** **301 - 323**

10.1	Introduction	301
10.2	Platforms	301
10.3	Sensors	303
	10.3.1 Characteristics of remote sensing imaging sensors	304
	10.3.2 Types of scanning system	305
10.4	Sensors Operating in the Visible and Infrared Regions	305
	10.4.1 Aircraft based sensors	306
	10.4.2 Satellite based sensors	308
	10.4.3 Ground based sensors: radiometer	314
10.5	Sensors Operating in the Active Microwave Region	315
	10.5.1 Airborne radar systems	316
	10.5.2 Satellite based radar systems	317
	10.5.3 Ground based radar systems	320
10.6	Creation of Remote Sensing Data	321
	Summary	322
	Exercises	322

**Chapter 11. VISUAL IMAGE INTERPRETATION** **324 - 336**

11.1	Introduction	324
11.2	Image Interpretation Tasks	325
11.3	Elements of Image Interpretation	325
	11.3.1 Image interpretation keys	327
11.4	Image Interpretation Equipment	328
11.5	Interpretation of Images Acquired in Different Wavelength Regions	330
	11.5.1 Interpretation on visible and NIR images	330
	11.5.2 Interpretation on TIR images	331
	11.5.3 Interpretation on microwave images	331
11.6	Thematic Map Preparation Using Visual Image Interpretation	333
	11.6.1 Preparation of an image overlay	334

11.6.2 Preparation of a map overlay	334
11.6.3 Preparation of report	335
Summary	335
Exercises	335

**Chapter 12. DIGITAL IMAGE PROCESSING** **337-381**

12.1 Introduction	337
12.2 Digital Image Processing System	337
12.2.1 Components of a digital image processing system - hardware and software	338
12.3 Digital Remote Sensing Data	339
12.3.1 Data formats	340
12.3.2 Histogram and image statistics	341
12.4 Remote Sensing Image Distortion and Rectification	342
12.4.1 Radiometric errors and corrections	343
12.4.2 Geometric errors	345
12.5 Image Enhancement	347
12.5.1 Contrast enhancement techniques	348
12.5.2 Smoothing techniques	352
12.5.3 Edge sharpening	352
12.6 Image Transformation	354
12.6.1 Arithmetic operations	354
12.6.2 Empirical indices	356
12.6.3 Principal component transformation	357
12.6.4 Colour transformation	357
12.7 Image Classification	359
12.7.1 Supervised classification	361
12.7.2 Unsupervised classification	363
12.8 Classification Algorithms	363
12.8.1 Statistical algorithms	363
12.8.2 Non parametric classifiers	367
12.9 Classification Accuracy Assessment	371
12.10 Image Fusion	374
12.11 Change Detection	376
12.12 Common Image Processing Software	378
Summary	379
Exercises	380

CONTENTS

xv

**Chapter 13. FUNDAMENTALS OF GEOGRAPHIC INFORMATION SYSTEM (GIS)** **382 - 401**

13.1 Introduction	382
13.2 Basics of GIS	383
13.2.1 Definition of GIS	383
13.2.2 Components of GIS	384
13.3 Spatial Data Models	388
13.3.1 Vector data model	388
13.3.2 Raster data model	390
13.4 Spatial Data Input	393
13.4.1 Keyboard entry	393
13.4.2 Manual digitizing	393
13.4.3 Automatic digitizing or scanning	395
13.4.4 Non spatial data input	396

13.4.5 Errors in data input and editing	396
13.5 Database Models and Database Management System	399
13.5.1 Hierarchical data models	399
13.5.2 Network data models	399
13.5.3 Relational database model	399
13.5.4 Object oriented database model	400
Summary	400
Exercises	400

**Chapter 14. SPATIAL DATA ANALYSIS** **402 - 427**

14.1 Introduction	402
14.2 Simple Data Retrieval and Query	402
14.2.1 Query by spatial attributes	403
14.2.2 Query by non spatial attributes	403
14.3 Measurements in GIS	403
14.3.1 Measurement of lines	403
14.3.2 Measurement of polygons	404
14.3.3 Measurement of other distances	404
14.4 Classification	404
14.4.1 Reclassification	405
14.5 Transformation Functions	405
14.5.1 Vector to raster and raster to vector transformations	405
14.5.2 Georeferencing or registration	406
14.5.3 Mosaicing or edge matching	406
14.5.4 Data reduction	406
14.6 Neighbourhood Functions	407
14.6.1 Buffering	407
14.6.2 Searching and filtering	408
14.6.3 Connectivity	408
14.7 Integration of Data or Map Overlay	409
14.7.1 Vector data overlay	410
14.7.2 Raster data overlay	410
14.7.3 Spatial interpolation	412

xvi CONTENTS

14.8 Digital Terrain Modeling	413
14.8.1 DEM : the grid model	415
14.8.2 DEM: triangulated irregular network TIN model	415
14.9 Analysis of Surfaces	416
14.10 Network Analysis	418
14.11 GIS Data Modelling	419
14.12 Spatial Data Output	420
14.13 Data Quality	422
14.14 Selection of a GIS	422
14.14.1 Various GIS software packages	425
Summary	426
Exercises	426

**Chapter 15. APPLICATIONS OF GEOMATICS ENGINEERING** **427 - 447**

15.1 Introduction	428
15.2 Large and Small Scale Topographic Mapping	428
15.2.1 Small scale mapping	429

15.2.2 Large scale mapping	429
15.3 Digital Elevation Model Using SAR Interferometry	430
15.4 Deformation Studies	431
15.5 Engineering Surveys	432
15.5.1 Water supply schemes	432
15.5.2 Road and railway engineering	432
15.5.3 Town and country planning	433
15.5.4 Water logging and flood prevention	433
15.6 Land Use Land Cover Mapping	433
15.7 Water Resources Applications	435
15.7.1 Ground water	436
15.7.2 Runoff	437
15.7.3 Soil moisture	438
15.7.4 Hydrological modelling	439
15.8 Site Investigations	440
15.9 Geological Applications	440
15.10 Forest Mapping	441
15.11 Disaster Management	442
Summary	446
Exercises	446
Appendix A : Spherical Trigonometry	448
Appendix B : Answers to Exercises	456
Appendix C : Bibliography	460
Appendix D : Coloured Photographs of Instruments and Images	465
INDEX	473
