

Contents

Part One WATER POWER DEVELOPMENT

1. Power in Flowing Water and Environmental Flow	1 - 12
1.1 Energy in surface water	1
1.2 Power estimates	2
1.3 Power benefit studies	4
1.4 The design or normal rated head	8
1.5 Environmental flow	10
2. Power House Layouts and Definitions	13 - 32
2.1 General	13
2.2 Layout of power stations	13
2.3 Terms relating to hydro power tariff	23
2.4 Definitions	28
3. Characteristic Types of Development	33 - 38
3.1 Characteristic types of development	33
3.2 Hydropower structures	35
3.3 World's largest capacity hydroelectric plants	37
4. Rock Mechanics and Foundation Treatment	39 - 71
4.1 Foundation rock problems	39
4.2 Foundation investigation methods	39
4.3 Classification of rock mass	49
4.4 Foundation design methods	53
4.5 Foundation treatment	56
4.6 Improving foundations having overburden	66

Part Two CANAL DEVELOPMENT

5. Economics and Layouts	75 - 79
5.1 Economics	75
5.2 General layout	76
5.3 Allocation of costs of multi purposes river valley projects	77
6. Barrages and Sediment Excluders	80 - 129
6.1 Barrage	80
6.2 Design of weir or barrage – hydraulic design	87
6.3 Weir section – design for sub-surface flow	94
6.4 Design of a barrage	104

6.5	R.C.C. raft design for barrage	112
6.6	Design of raft on soil line theory	114
6.7	Sediment excluder	123
6.8	Barrages in steep mountaneous reaches of rivers	126
7. River Training Works		130 - 159
7.1	Necessity of river training	130
7.2	River regions and river characteristics	130
7.3	Classification of rivers on alluvial plains	132
7.4	Causes of meandering	132
7.5	Meander parameters	132
7.6	Cut-off	133
7.7	Curvature of flow	135
7.8	Methods for training of rivers	135
7.9	Guide banks	135
7.10	Design criteria for guide bunds	136
7.11	Design of guide bunds and launching aprons	143
7.12	Groynes or spurs	148
7.13	Design of repelling spour	156
7.14	Special types	157
7.15	Pitched islands	157
7.16	Bank protection	159
7.17	Bridge piers	159
8. Power Channel - Earthen and Lined		160 - 175
8.1	Power channel	160
8.2	Design of earthen channels	161
8.3	Lined channels	169
8.4	Drainage and pressure release arrangements	172
8.5	Design of a lined section	174
9. Forebay and Escape Fall		176 - 190
9.1	General layout of forebay	176
9.2	Escape structure	178
9.3	Design of a glaxis fall	180
9.4	Design example of a glaxis fall (flumed)	183
9.5	Vertical drop fall	185
9.6	Design example of a Sharda type vertical drop fall	188
10. Sediment Ejector and Cross Drainage Works		191 - 240
10.1	Introduction	191
10.2	Sediment ejector	192
10.3	Important design considerations of cross drainage works	198
10.4	Design of an aqueduct	204
10.5	Some typical designs of aqueducts	211
10.6	Criteria for earthquake resistant design of an aqueduct	215
10.7	Design of a siphon	230
10.8	Caution in design and construction of siphons in clayey soils	240

11. Earth and Rockfill Dams	241 – 284
11.1 Introduction	241
11.2 Foundation for earth dams	242
11.3 Causes of failures of earth dams	244
11.4 Design criteria of earth dams	247
11.5 Prevention of erosion - embankment details	247
11.6 Seepage through dams	251
11.7 Control of seepage through foundations	257
11.8 Drainage in earth dams	263
11.9 Stability analysis	265
11.10 Selection of type of earth dams	275
11.11 Maintenance and treatment of common troubles in earth dams	277
11.12 Rockfill dams	278
11.13 Earth dams on soft foundations	280
11.14 Internal erosion potential in the cores of embankment dams	281
12. Gravity Dams	285 - 325
12.1 General	285
12.2 Forces acting on dam	286
12.3 Types of loads	287
12.4 Stability analysis methods	296
12.5 Safety criteria	298
12.6 Gravity analysis	300
12.7 Internal stress calculation	307
12.8 Graphical determination of shear stress	314
12.9 R. S. Varshney's stress coefficients for dam design	315
12.10 3D analysis of gravity dams	317
12.11 Instrumentation in concrete dam	321
13. Buttress Dams	326 - 339
13.1 General	326
13.2 Types and selection of buttress dam	327
13.3 Design principles	331
13.4 The most economical profile having no tension	332
13.5 Buttress design by unit column theory	333
13.6 Design on the basis of unit column theory	338
14. Arch Dams and Spillways	340 - 405
14.1 General	340
14.2 Valleys suited for arch dam	341
14.3 Laying out dam in plan	341
14.4 Types of arch dams	342
14.5 The appurtenant works	345
14.6 Design of an arch dam	347
x	CONTENTS
14.7 Trial load analysis	360
14.8 Stability at abutments	365
14.9 Preliminary dimensioning	366
14.10 Spillways	368

14.11	Design principles of ogee or overflow spillway	374
14.12	Design principles of side channel spillway	383
14.13	Design principles of chute spillway	383
14.14	Design principles of siphon spillway	389
14.15	Design principles of shaft spillway	391
14.16	Stepped spillway	393
14.17	Cascade spillway	394
14.18	Energy dissipators	395

15. Galleries and Sluices **406 - 435**

15.1	General	406
15.2	Stress concentration at holes	407
15.3	Openings in dams	410
15.4	Reinforcement for circular galleries	411
15.5	Rectangular gallery	413
15.6	Multiple openings	413
15.7	Design of a gallery with semi circular top	414
15.8	Design of rectangular gallery	414
15.9	Outlet sluices – general	417
15.10	Hydraulics of flow through a sluice	419
15.11	Intake structures	421
15.12	Profiles of sluices in concrete dams	421
15.13	Transition shapes	423
15.14	Aeration of sluices	424
15.15	Structural design of outlet sluice	425

16. Gates and Valves **436 - 481**

16.1	General	436
16.2	Control equipment	436
16.3	Hydraulic gates	436
16.4	Radial gates	455
16.5	Air vent	462
16.6	Weight estimates	463
16.7	Illustrative design of radial gate	465
16.8	Control valves	477

Part Four
WATER CONDUCTING SYSTEM

17. Intake Structures **485 - 540**

17.1	General	485
17.2	Location and intake type	485
17.3	Trash racks	487
17.4	Shape of inlet	508

CONTENTS

xi

17.5	Intakes through concrete dam	512
17.6	Aeration in inlets	513
17.7	Design of intake	514
17.8	Sediment exclusion arrangements	533

18. Tunnels **541 - 612**

18.1	General	541
18.2	Rock mechanics and tunnels	542
18.3	Stresses in rock tunnels	546
18.4	Geometric design	557
18.5	Hydraulic design	559
18.6	Structural design of concrete lining in rock	564
18.7	Structural design of concrete lining in soft strata and soils	577
18.8	Tunnel supports	578
18.9	Rock bolts	584
18.10	Grouting	592
18.11	Shotcrete lining	593
18.12	Tunnelling methods	597
18.13	Tunnel supports	600
18.14	Ground water in tunnels	602
18.15	New Austrian tunnelling method (NATM)	603
18.16	Use of freezing method in tunneling	609
18.17	Tunnelling in soft/loose rock mass	611

19. Penstocks and Pressure Shafts **613 - 664**

19.1	General	613
19.2	Types of penstocks	613
19.3	Other parts of penstock's alignment	615
19.4	Economical diameter of penstock	618
19.5	Design of penstocks	621
19.6	Number of penstocks and equivalent penstock diameter	624
19.7	Pressure conduits in rock or concrete	625
19.8	Anchors and supports (saddles)	649
19.9	Miscellaneous penstock accessories	660
19.10	Bulkheads	660
19.11	Special types of penstock construction	662

20. Surge Tanks **665 - 729**

20.1	General	665
20.2	Functions of a surge tank	666
20.3	Types of surge tanks	666
20.4	Design considerations of surge tanks	672
20.5	Methods of surge analysis	673
20.6	Simple surge tank	673
20.7	Restricted orifice surge tank	694
20.8	Differential surge tank	703
20.9	Stability of surge tank	720
20.10	Downstream surge tanks	722

Part Five
POWER HOUSES

21. Hydraulic Design of Power Stations **733 - 788**

21.1	The power house	733
21.2	Turbines	733

21.3	Generators	741
21.4	Governing and protection equipment	742
21.5	Transformer	743
21.6	Turbine efficiency determination	743
21.7	Setting of turbines-draft head	745
21.8	Hydraulic design of spiral case	748
21.9	Hydraulic design of draft tube	755
21.10	Dimensioning of power house	764
21.11	Preliminary dimensioning of a power house	765
21.12	Approximate dimensions and weight of pelton wheels	787
21.13	Approximate dimensions and weight of propeller turbine	788

22. Structural Design of Hydel Power Station 789 - 812

22.1	Introduction	789
22.2	Hydraulic thrust	789
22.3	Structural design	791

23. Tidal Power Stations 813 - 822

23.1	Introduction	813
23.2	Types of tidal plants and their operation	814
23.3	Turbines for tidal plants	819
23.4	Possibilities of tidal power in India	820

24. Pumped Storage Plants 823 - 830

24.1	Introduction	823
24.2	Types of pumped storages	824
24.3	The economics of pumped storage	825
24.4	Pump turbines	827

**Part Six
SMALL HYDRO**

25. Small Hydro Scenario 833 - 837

25.1	Small hydro power – development scenario	833
25.2	Benefits of small hydro	834
25.3	Small hydro potential in India and in Himalayan region	836

26. Small Hydro Stations – Design 838 - 857

26.1	Introduction	838
------	--------------	-----

CONTENTS xiii

26.2	Civil works of medium and high head micro/mini hydro schemes	839
26.3	Civil works of low head micro/mini hydro schemes	849
26.4	Gates for small hydro schemes	852

27. Turbines and Generators for Small Hydro 858 - 882

27.1	Turbines	858
27.2	Generators	878

**Part Seven
WATER RESOURCES DEVELOPMENT AND USE**

28. Water Resources Development - Basics of Irrigation	885 - 919
28.1 Irrigation	885
28.2 Soil water plant relationships	888
28.3 Water requirements of crops	906
28.4 Methods of determining duty of water	909
28.5 Effective rainfall	915
29. Irrigation and Drainage Practices	920 - 965
29.1 Introduction – modern methods of irrigation	920
29.2 Irrigation efficiencies	921
29.3 Methods of irrigation	922
29.4 Automation in surface irrigation methods	926
29.5 Sprinkler or spray irrigation	932
29.6 Sub-irrigation	933
29.7 Intrasoil (drip/trickle/micro) irrigation	934
29.8 Mist irrigation	934
29.9 Regulation and maintenance of a canal system	934
29.10 Farm irrigation system - on farm development works	937
29.11 Maintenance of channels	947
29.12 Water logging and salinity	949
29.13 Drainage	951
29.14 Types of the drainage system	958
30. Ground Water and Tube Wells	966 - 1008
30.1 Occurrence of ground water	966
30.2 Types and functions of aquifer	967
30.3 Ground water movement	968
30.4 Factors affecting permeability	970
30.5 Steady state flow in fully penetrating wells	970
30.6 Unsteady-state radial flow in a fully penetrating well	974
30.7 Partially penetrating wells	977
30.8 Interference of wells	979
30.9 Pumping tests	981
30.10 Irrigation tubewells	983
30.11 Classification of tubewells	985
30.12 Types and selection of strainers	988
30.13 Boring of tube wells	991
xiv	CONTENTS
30.14 Types and selection of pumping sets	994
30.15 Design of a tubewell	1000
30.16 Siting of a tubewell	1005
30.17 Yield of ground water	1005
30.18 Artificial recharge	1006
31. Foundations	1009 - 1030
31.1 Types of foundations	1009
31.2 Spread foundations	1009
31.3 Depth of foundations	1010
31.4 Bearing capacity	1011
31.5 Plate loading test	1017

31.6	Standard penetration test	1019
31.7	Foundation settlement	1024
31.8	Piles for deep foundations	1026
31.9	Well foundations	1029
	References	1031
	Project Index	1032
	Author Index	1036
	Subject Index	1040
